Bachelor's in mathematics

Algebra, analysis, probability, introduction to computer science
Minor Chinese

Lycée Montaigne (« Preparatory Classes ») PCSI

2017-2018

Intensive program in advanced mathematics, physics, chemistry

PROJECTS

Art & Webtoon E-commerce Platform I designed and developed a full-stack e-commerce web application using HTML and Javascript to promote and commercialize original artworks and webtoon productions. Built and managed the backend architecture to securely handle art and manga catalogs, while integrating Web3 functionality for NFT-based access keys and Bitcoin transaction tracking.

Experience-Sharing Social Network This project is a social application allowing users to log, share, and quantify personal life experiences within a community. Implemented backend logic and data structures to efficiently manage user profiles, interactive feeds, and engagement metrics.

Restaurant Management Assistant (Academic Project) Engineered a management software suite in Java applying Object-Oriented Programming principles to streamline and optimize daily restaurant operations.

SKILLS

Languages	Python, C, MATLAB, SQL, Java, HTML
Softwares	GitHub, Excel
